INTRODUCTION

This publication represents the 65th annual report of pests and pathogens found in agricultural quarantine inspection. It is the ninth in the series to be assembled and printed from computerized interception records. It summarizes records of exotic living plant pests or pathogens of quarantine significance found in, on, or with plants, plant products, carriers, and container vans, imported or entering into the continental United States and Hawaii or the offshore possessions, or moving between these areas.

Accumulated totals for organisms are listed under headings indicating either that the intended use of the contaminated host is consumption or propagation, or that the item is not intended for importation and is designated as nonentry.

Incompletely indentified organisms belonging to economic pest groups are included in the lists when they are not taxonomically separable to the degree required for a comprehensive pest risk assessment.

Honeybees of the genus Apis are included to reflect enforcement of the Honeybee Act of 1922, as amended 1976.

This list was compiled from interception records processed during fiscal year 1982. Insect, pathogen, mite, and nematode identifications are made by personnel of Plant Protection and Quarantine (PPQ), Animal and Plant Health Inspection Service (APHIS), the Insect Identification and Beneficial Insect Introduction Institute (IIBIII), Agricultural Research Service (ARS), and cooperating scientists.

Scientific names of listed organisms were reviewed by scientists of PPQ and IIBIII. Scientific and common names of host plants were verified using Hortus III, Standardized Plant Names, and other botanical resources.

PEST ORIGIN

Countries of origin shown for pest interceptions are obtained from the best available source at the time of interception. They are not meant to be used for the purpose of providing distribution data for a pest. Though not meant to be definitive, every effort is made to ensure the accuracy of this information.

ERRATA

In the APHIS 82-8 (September 1982) issue, Xanthomonas citri (Hasse) Dows (now known as Xanthomonas campestris pv. citri (Hasse) Dye) was erroneously listed with Australia as a country of origin. This reference is incorrect and should be deleted.

CHANGE IN NOMENCLATURE

DISEASE

Xanthomonas campestris pv. citri (Hasse) Dye-----(=Xanthomonas citri (Hasse) Dows.)
